Welcome

- Each ## heading starts a new slide
- Bullet points are written as normal Markdown
- Math works too: $a^2 + b^2 = c^2$

Boxes

Definition

A **prime number** is a whole number greater than 1 that can only be divided by 1 and itself.

Example: 2, 3, 5, 7 and 11 are the first five prime numbers.

Two columns

Left column

- Text, lists and math
- or boxes, as on the right

Exercise: Solve $3x - 4 = 11$.

The values of $f(x) = x^2 - 2x - 3$:

Value table					
x	-1	0	1	2	3
$f(x)$	0	-3	-4	-3	0

Warning and info

- **Not part of the syllabus**
- **For your information**
- **Remember units in every answer**
- **This slide is a repetition**
