# Introduction

This page shows the most common Markdown formatting. Write *italic*, **bold** and `code` straight in the text. Leave an empty line between paragraphs.

## Lists

- A bullet point
- Another bullet point
  - Indent with four spaces for a sub-point

1. First step
2. Second step

## Math

Inline math such as $a^2 + b^2 = c^2$ sits inside the sentence. Display math gets its own line:

$$x = \frac{-b \pm \sqrt{b^2 - 4ac}}{2a}$$

Use `align` to line up the steps of a calculation. The `&` marks where the lines line up, and `\\` ends a line:

$$\begin{aligned} (x + 3)^2 &= x^2 + 2 \cdot 3 \cdot x + 3^2 \\ &= x^2 + 6x + 9 \end{aligned}$$

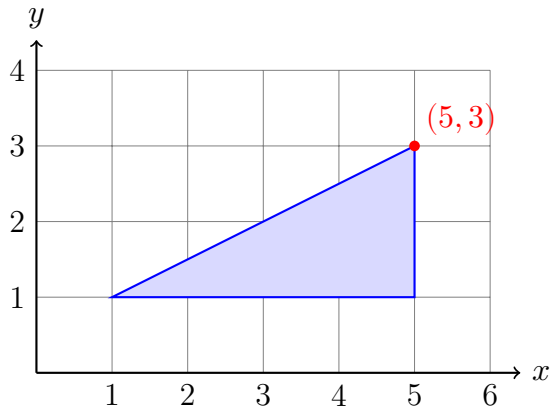
## Tables

| Shape | Area |
|---|---|
| Square | $s^2$ |
| Rectangle | $l \cdot w$ |
| Circle | $\pi r^2$ |

Markdown tables are quick to write. For more control, such as merged cells, lines between cells and text that wraps inside a cell, write the table in LaTeX:

| **Common shapes** | | |
|---|---|---|
| **Shape** | **Area** | **Note** |
| Square | $s^2$ | All four sides have the same length $s$. |
| Circle | $\pi r^2$ | $r$ is the radius, which is half the diameter. |

## Drawings with TikZ



## Quotes and footnotes

> A quote starts with > at the beginning of the line.

A footnote is marked in the text like this.[1]

[1]The footnote text is printed at the bottom of the page.
